Involve community"*

SCHOOL DISTRICT NO. 64

POLICY 3150 Severe Allergies/Anaphylaxis

Section: Health and Safety

Dates of Revisions: March 13, 2002

Date of Adoption and

Resolution Number: June 13, 2018 -76/18

Rationale:

"Anaphylaxis is a serious allergic reaction that is rapid in onset and can possibly be fatal. Food and insect stings are the most common allergens to trigger such a reaction. The highest incidence of anaphylaxis occurs in school-aged children, making it essential that schools have an anaphylactic safety plan."¹

Definitions:

1. **Anaphylaxis** refers to a collection of severe allergies affecting multiple systems in the body. The most dangerous symptoms include breathing difficulties and a drop in blood pressure or shock, all of which are potentially fatal.
2. Common examples of potential **allergens** include certain foods, animals, plants, insect stings, or a wide range of other substances, including scented products, cleaners, chemicals, and other materials affecting air quality.

Policy:

The School District No. 64 Board of Education recognizes that it has a duty of care to students who are at risk from life- threatening allergic reactions while under school supervision. The board also recognizes that this responsibility is shared among the students, parents, the school system and health care providers.

The purpose of this policy is to minimize the risk to students with severe allergies to potentially life-threatening allergens without depriving the severely allergic student of normal peer interactions or placing unreasonable restrictions on the activities of other students in the school.

This policy ensures that students at risk are identified, strategies are in place to minimize the potential for accidental exposure, and staff and key volunteers are trained to respond in an emergency

situation.

While the board cannot guarantee an allergen-free environment, the board will take reasonable steps to provide an allergy-safe, allergy-aware and supportive environment for students with life-threatening allergies.

The board authorizes the Superintendent of Schools to create and oversee implementation of all procedures and forms required under this Policy. Principals are responsible for ensuring that schools create and maintain as safe, healthy, and inclusive an environment as possible for students who suffer from life-threatening allergies that can result in an anaphylactic reaction.

All schools in School District No. 64 must implement the steps outlined in school district procedures on anaphylaxis, which include:

1. a process for identifying anaphylactic students;
2. a process for keeping a record with information relating to the specific allergies for each identified anaphylactic student to form part of the student's Permanent Student Record;
3. a process for establishing an emergency procedure plan, to be reviewed annually, for each identified anaphylactic student to form part of the student's student record;
4. an education plan for anaphylactic students and their parents to encourage the use by anaphylactic students of Medic-Alert identification;
5. procedures for storage and administering medications, including procedures for obtaining preauthorization for employees to administer medication to an anaphylactic student; and
6. a process for principals to monitor and report information about anaphylactic incidents to the board in aggregate form.
